Professional Summary

Backend-focused PHP web developer with 2 years of professional experience designing, developing, and maintaining scalable web applications. Strong expertise in backend business logic, third-party API integrations, and MySQL database optimization. Experienced in owning backend modules end-to-end, handling complex workflows, and delivering production-ready systems in agile environments.

Work Experience

02/2024 – Present
Ahmedabad

Backend PHP Web Developer

Drop Techno Lab Private Limited – Ahmedabad

- Designed, developed, and maintained backend modules for multiple PHP-based web applications using MVC architecture
- Owned backend logic, database design, and API integrations for key application features
- Integrated multiple third-party APIs with secure request/response handling, validation, logging, and error management
- Designed and optimized MySQL queries using joins, indexing, and query optimization techniques to improve performance
- Implemented authentication systems, role-based access control, and secure input validation
- Debugged and resolved production issues, improving system stability and reliability
- Collaborated with cross-functional teams using Git and Jira in agile development workflows

Key Contributions

- Led backend development of a **scalable multi-vendor, multi-language e-commerce platform**
- Designed dynamic admin panels and backend CMS features
- Implemented a **custom multilingual system** with dynamic language key generation and file-based translations
- Built and maintained multiple client-specific systems using **custom PHP frameworks**
- Developed advanced backend features including:
 - Automated email notifications and reminders
 - Social authentication integrations
 - Role-based permission systems
 - Scheduled background jobs using cron
- Actively contributed to UI implementation using HTML, CSS, and JavaScript for responsive layouts
- Mentored junior trainees, reviewed code, and helped enforce backend best practices

Project Experience

Multi-Vendor & Multi-Language E-Commerce Platform

Tech: PHP (MVC), CodeIgniter, MySQL

- Architected scalable backend modules for vendors, products, and orders
- Designed a dynamic multilingual system supporting runtime language expansion
- Implemented secure authentication and admin workflows
- Optimized database structure and queries for performance

Loan & Finance Mediation Platform

Tech: Custom PHP Framework, MySQL, APIs

- Developed a complex backend system acting as a mediator between lenders and borrower companies
- Implemented configurable business workflows and multi-stage application processing
- Integrated third-party services such as CreditSafe and Companies House
- Built secure document upload and storage using BOX folders
- Developed a **decision engine** to evaluate application eligibility
- Integrated CRMs including Salesforce, HubSpot, and Go High Level

Dynamic Database Creation System

Tech: PHP, MySQL

- Implemented runtime database and table creation based on system configuration
- Ensured data integrity, validation, and scalable schema handling

Technical Skills	
Backend & Architecture • PHP (OOP, MVC Architecture) • CodeIgniter • Custom PHP Frameworks	APIs & Integrations • REST API development & integration • Third-party APIs • Authentication, validation, error handling
Database • MySQL • Query optimization, joins, indexing	Frontend (Supporting) • HTML, CSS • JavaScript (basic), jQuery • AJAX, JSON, XML
Tools & Technologies • Git (GitHub, GitLab) • Postman • VS Code • phpMyAdmin • Slack • Operating Systems: Linux, Windows	Project & DevOps • Jira, ClickUp (Agile / Scrum project tracking) • Cron jobs & scheduled background tasks • Server-side file uploads & processing • cPanel, FTP, basic server configuration

Education
Master of Computer Applications (MCA) LJ University, Ahmedabad  2022 – 2024
Bachelor of Commerce (Hons.) Marwadi University, Rajkot  2019 – 2022

Languages
English Hindi Gujarati

Interests
Backend system development Problem-solving and code optimization Playing guitar and exploring music
